The Problem with Child ID Cards... Why Digital ID is Better

Parents want to make an informed decision about the safety of their children. Understanding the difference between old-fashioned child ID cards and the SKIP digital ID program is the first step!

SKIP provides a high-tech, cost-effective solution that provides law enforcement agencies with critical information that dramatically improves agency response time when trying to locate a missing child or issue an Amber Alert.

Modern problems like child abduction require modern solutions.

Child ID cards are an old-fashioned way of dealing with a modern problem. They don't take advantage of the newest technology available to bring kids home safely and quickly.

The National Center for Missing &

Exploited Children recommends updating your children's pictures every 6 months. Child ID cards **can't** be updated to keep your child's pictures and information current.

If the parent gives the ID card to the child and he loses it at the park, the child's picture and personal information can fall into the hands of pedophiles, who "hunt" at parks and other places where children gather.

With the SKIP disk, you can continually update your child's pictures and physical information, especially since kids grow so fast. Once you have a SKIP disk, you can update it until your child is 30 if you want to! It is a LIFELONG identification tool.

The bottom line? SKIP provides a high-tech, cost-effective solution! Your children deserve the very best child ID kit you can get. Your children deserve SKIP Safe Kids ID Program.

What is SKIP?

SKIP is a computerized child ID program. It is easy to use! Because it is digital, it is the fastest & most efficient way to get information to the police if an Amber Alert is to be issued.

- SKIP is a program on a CD-ROM that **you** complete on your home computer!
- Update info & pictures on your home computer as your child grows.
- Stores pictures, vital statistics such as child's height, weight, hair/eye color, birthmarks, scars, disabilities and medical issues.
- Create, print & email "Missing Child" Posters to the police, media and family.
- Get this important Poster into the hands of the police as soon as your child goes missing.
- All SKIP child ID kits include at least one Toothprint, to capture your child's bite pattern, which is as individual as your child's fingerprints, DNA and scent for police tracking dogs.

toothprints

In the event of an emergency, the SKIP program create's - at the click of a button - a Missing Child Poster complete with your child's pictures, vital statistics and details about their disappearance.

More importantly, the Missing Child Poster can be immediately emailed directly to the police, shaving off hours of the most critical time when a child is first missing.
